PROFILE

QA and test automation engineer with enterprise experience at Vodafone VOIS and Instabug since 2022, preceded by freelance testing work. Builds and maintains API, web and mobile automation using Java and Python, integrates testing into Jenkins, and investigates failures across application and network layers. Mechatronics engineering graduate with experience validating asynchronous API workflows and third-party responses.

PROFESSIONAL EXPERIENCE

Senior Testing Engineer | Vodafone VOIS

Jul 2025 - Present | Cairo, Egypt

- Develop and maintain REST API and Appium test automation integrated with Jenkins, including scheduled and parallel execution.
- Enhanced Jenkins reports with detailed failed-scenario information to support investigation and defect triage.
- Test synchronous and asynchronous fintech API workflows, including third-party response validation and request-ID correlation, using the existing asynchronous testing framework.
- Perform JMeter testing, measuring and validating throughput and response time for individual test cases.
- Investigate test failures and communicate results through automated reports and notifications.
- Received one employee recognition award at Vodafone.

Automation Software Testing Engineer | Instabug

May 2022 - Jul 2025 | Cairo, Egypt

- Built an SDK testing framework using Appium, MITMproxy, Pytest and TestMo, reducing the testing cycle from 20 days to 3-5 days.
- Tested SDK behavior across Android, iOS, Flutter and React Native, including network-level validation with MITMproxy.
- Improved API test execution: reduced overall execution from 90 to 30 minutes and selected scenarios from 30-45 minutes to 4 minutes.
- Developed Cypress tests for dashboard functionality and contributed to API automation reliability.
- Used kubectl to verify test-environment availability and inspect pod status when failures occurred.
- Owned testing for mobile squad features, reviewed automation changes and mentored junior QA engineers.
- Received Best Squad Member recognition in two quarters.

EARLIER EXPERIENCE

Software Testing Engineer | Freelance

Jan 2020 - Apr 2022 | Cairo, Egypt

- Performed website testing for Weqaya and Abnaa Sinai, covering user workflows, defect reporting and release validation.

TECHNICAL SKILLS

Programming: Java, Python; JavaScript/TypeScript; shell scripting

Automation: Selenium, Cypress, Appium, REST Assured, Pytest, TestNG, JUnit, Cucumber

API and performance: Postman/Newman, synchronous and asynchronous API testing, third-party response validation, JMeter throughput and response-time analysis

Delivery and environments: Jenkins, Git/GitLab; Docker project experience; kubectl for test-environment and pod-status checks

Quality and collaboration: Test planning, regression and integration testing, defect analysis, Jira, TestMo, TestRail, mentoring

SELECTED PROJECTS

AI-assisted automation UI | In development

Developing a UI-based tool to help QA engineers write automation scripts. The project focuses on assisting script authoring and remains under development.

Jenkins reporting and API automation | Vodafone VOIS

Integrated API execution with Jenkins scheduling and reporting, and improved failed-scenario details to support investigation.

SDK test automation framework | Instabug

Combined Appium, Pytest, MITMproxy and TestMo for automated SDK and network-level validation across mobile platforms.

EDUCATION

Mechatronics Engineering | Arab Academy for Science and Technology

Sep 2015 - Jul 2020 | Excellent with Honors
Graduation project: AUV/ROV (Autonomous Underwater Vehicle)

CERTIFICATIONS AND TRAINING

ISTQB Foundation Level; software testing techniques; test case and bug report writing; Java and Cucumber; Selenium WebDriver with Java; Appium.
